CITY STATE ZIP

### BRIEF INSTRUCTIONS FOR MEASURING NON-TYPICAL COUES' DEER

Measurements must be made with a 1/4" flexible steel tape or steel cable and recorded to the nearest one-eighth of an inch. To simplify addition, please enter fractional figures in eighths and in proper fractions.

**A. Number of Points on each antler.** To be counted a point, a projection must be at least one inch long AND, at some location at least one inch from the tip, the length of the projection must exceed its width. Beam tip is counted as a point but not measured as a point.

**B. Tip to Tip Spread** is measured between tips of main beams.

**C. Greatest Spread** is measured between perpendiculars at a right angle to the center line of the skull at widest part whether across main beams or points.

**D. Inside Spread of Main Beam** is measured at a right angle to the center line of the skull at widest point between main beams. Enter this measurement again in "Spread Credit" column if it is less than or equal to the length of longer main beam. If greater, enter longer main beam length for Spread Credit.

**E. Total of Length of Abnormal Points.** Abnormal points are generally considered to be those non-typical in location (such as points originating from a point or from bottom or sides of main beam). Measure in usual manner and enter and enter in appropriate blanks.

**F. Length of Main Beam** is measured from the center of the lowest outside edge of burr over outer curve to the most distant point of the main beam. Begin measuring at the location of the burr where the center line along the outer curve of the beam intersects the burr.

**G-1-2-3-4-5-6-7. Length of Normal Points.** Normal points project from the top of the main beam as shown in illustration. They are measured from the top edge of the main beam (baseline), over their outer curve, to their tip. To establish the appropriate baseline, lay a tape or (preferably) cable on the top edge of the beam on each side of the point and draw a line under the cable to reflect the top edge of the beam as if the point was not present. Record point lengths in appropriate blanks.

**H-1-2-3-4. Circumferences.** Circumferences are taken at the smallest place between corresponding normal points, as illustrated. If first point is missing, take H-1 and H-2 at smallest place between burr and second point. If G-4 is missing, take H-4 halfway between the center of G-3 and tip of main beam. Circumference measurements must be taken with a steel tape (a cable cannot be use for these measurements).

**Drying Period:** To be eligible for entry in the Bowhunting in Arizona Records, a trophy must first have been stored under normal room temperature and humidity for at least 60 days after date of kill. No trophy will be considered which has been altered in any way from its natural state.

### ENTRY REQUIREMENTS

- 1) Fully completed Score Sheet from Bowhunting In Arizona, Pope & Young or Boone & Crockett. Must be signed by the hunter, a witness and the Official Measurer.
- 2) Fully completed application form. Must be signed by the hunter and a witness.
- 3) Fully completed Fair Chase Affidavit. Must be signed by the hunter and a witness.
- 4) Three (3) photographs of the antlers, horns or skull.
- 5) One (1) photograph of the entire animal in the field, with the hunter, if available.
- 6) A \$20 application processing fee which can be paid by check or money order. Payable to: Bowhunting in Arizona
- 7) \* Mail the entire packet; completed Score Sheet, Application form, Fair Chase Affidavit, four photographs and the entry fee to:
